N-Gram Language Models

```
This assignment has several deliverables:

• Your improved book for the functions in the cases or code.
                           Part 0: Generating N-Grams
Part 0: Generaling N-Grams with a behavior of the quality of the property of 
The contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract 
                                                                                 The state of the s
                                                      The action (Leaf (1985)

The action (Leaf (1986)

The action (Leaf (198
                           After generating articulal of chair passages, do you notice anything? They all start with PT to fact, with we fill a certain order, the first word is always PHOT Wifey is EacT in the model spring to be Deven? In it supports your, I will generate the word "PHOT" his, probably not. Explain what is going on the pure withing.
                           gange in types without.

Part 2: Perplexity, Smoothing, and Interpolation

Interpolation

In the part of the asset in the part of the part of the part of the second of the solution of the so

                                        Here was the relicious equi-
ples in intrinsic evaluation of a language model we need a test set. As
with many of the installation models in our field, the probabilities of an
Migraan recold come from the organs is a trained on, the insting set or
the set of the
party party party consoler under soft and of the sets at or true!
corpax. We will also inventions call test sets and other discusses that
are not in our tailings sets held out corpora because we held them out
form the training data.
                                                      But what does it mean to "If the test set"? The answer is simple: whichever model assigns a higher probability to the test set is a better model.
             We implemed the most assumance attitude to assume a stress of language models appropriate and the property of the language models as a first of the forminate probability of the language models as a first of the forminate probability of the language models as a first of the first of the content probability of the language models and an administrative probability of the language models and the language models are sufficiently of the language models and the language models are sufficiently of the language models and the language models are sufficiently of the language models and the language models are sufficiently of the language models and the language models are sufficiently of the language models and the language models are sufficiently of the language models are sufficiently of the language models are sufficiently of the language models and the language models are sufficiently of the language models and the language models are sufficiently of the language models are sufficiently of the language models are sufficiently of the language models and the language models are sufficiently of the language models ar
                                                                                                                                                                                                                                                                                                                                                                                                         = \sqrt[n]{\prod_{i=1}^n \frac{1}{P(m_i \mid m_1,\dots,m_{i-1})}}
                           Laplace transiting is described in section 6.6.1. Laplace transiting abost one to each close! 
place for advances came above encotings, force there are victorized in the vicinitization in the vicinitization and each consequence, we also need to adjust the december to take total assumed. 
The excita Vicinitization.
                                                                                                                                                                                                                                                                                                                                                                                                                                    P_{lopton}(w_i) = \frac{count_i + 1}{N + |V|}
